

Durham Regional Road 12

Year of Construction: 2017

Location: Brock, ON

Product Installed: TX160 + Terrafix 270R

System: Pavement Optimization

CASE STUDY

CHALLENGE

The site had a historical pavement failure, after several repairs and maintenance, WSP was hired to assess the conditions and design a new pavement. Geogrid allowed minimal excavation, hauling, and section thickness. At the same time, it provided the reliability and expected design life-traffic required by the region and the consultant.

SOLUTION

Regional Road 12 had a design of 2 layers TriAx that were preventing/minimizing differential settlement (2015) then it was installed in 2017.

SPECIAL NOTE
